Five questions before you buy another software.

TURN2Digital

Ask the vendor first

1. What does it do that nobody else does?
2. Can it connect without custom code?
3. Does it meet the rules of your industry?

Then ask yourself

1. Is it sized for a company like mine?

2. Does it make the rest of my stack better?

If one answer is no,
it doesn't go in.
